

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

Q. Sub P.
1. (currently amended): An electronic still camera with a printer incorporated therein, the electronic still camera being capable of picking up an electronic image signal from a subject through an imaging device and printing an image on a recording material based on ~~the said~~ the said electronic image signal, ~~characterized by comprising:~~

a monitor that is incorporated into a said camera ~~body~~ and able to display an image based on ~~the said~~ the said electronic image signal at ~~approximately~~ substantially the same magnification as ~~when the image is printed on the recording material by the said printer;~~

wherein the image on said monitor can be viewed concurrently with the printing of the image on said printer.

2. (original): An electronic still camera as claimed in claim 1, wherein the monitor has a screen size that is approximately equal to a predetermined printing area of the recording material.

3.(original): An electronic still camera as claimed in claim 1 or 2, wherein the monitor consists of pixels that are approximately equal in number to pixels of the image printed in a predetermined printing area of the recording material.

Q
4. (original): An electronic still camera as claimed in claim 1, wherein the monitor is an LCD panel.

5. (original): An electronic still camera as claimed in claim 1, wherein the recording material is a self-developing type instant photo film.

6. (original): An electronic still camera as claimed in claim 2, further comprising an electronic viewfinder for displaying moving images of the subject in a real time fashion based on the electronic image signal picked up through the imaging device, wherein the electronic viewfinder is smaller in size than the monitor.

7. (currently amended): A printer for printing an image on a recording material based on electronic image signal, comprising a monitor that is incorporated into a printer body, for displaying an image based on the electronic image signal at approximately the same magnification as when the image is printed on the recording material,

wherein the image on said monitor can be viewed concurrently with the printing of the image on said printer.

8. (original): A printer as claimed in claim 7, wherein the recording material is a self-developing type instant photo film.

9. (original): A printer as claimed in claim 7, wherein the monitor has a screen size that is approximately equal to a predetermined printing area of the recording material.

10. (original): A printer as claimed in claim 7 or 9, wherein the monitor consists of pixels that are approximately equal in number to pixels of the image printed in a predetermined printing area of the recording material.

11. (original): A printer as claimed in claim 7, wherein the monitor is an LCD panel.

12. (new): A printer as claimed in claim 7, wherein said printer uses a three color frame printing process.
